

GSS User Guide

Start working

Geo Store Switcher is very simple in usage. First you should go to extension configuration and enable it:

Stores > Configuration > TOBAI > Geo Store Switcher: Enable => Yes

- 1 Start working
- 2 Disable for IPs
- 3 Disable for User-Agent
- 4 Default Store View
- 5 Country Mapping
- 6 Country Settings
- 7 Country Groups
- 8 Examples

The screenshot shows the Magento Configuration interface. On the left is a vertical sidebar with icons for Dashboard, Sales, Products, Customers, Marketing, Content, Reports, Stores, System, and Find Partners & Extensions. The main content area is titled 'Configuration'. At the top, there's a 'Store View' dropdown set to 'Default Config' and a 'Save' button. Below this, a sidebar lists configuration categories: General, Catalog, Customers, Sales, TOBAI (which is expanded), Services, and Advanced. Under the TOBAI category, the 'Geo Store Switcher' section is active, showing a 'GeoIP2' sub-section. To the right of this sidebar, the 'Store Switcher Configuration' section contains an 'Enabled' dropdown menu currently set to 'No', with a '[STORE VIEW]' link next to it. The footer of the page includes the Magento logo, copyright information for 2016, and the text 'Copyright© 2016 Magento Commerce Inc. All rights reserved.'.

When you set "Enable" parameter to "Yes" you will see other extension settings.

It's possible to enable the extension not for all websites or event stores. You can change **Store View** (left top corner) and enable/disable it for specified scope.

Disable for IPs

In case you want to disable the extension for IP on a list of IP you can set these IP/IPs separated by comma.

Default Store View

Sometimes user comes from the country or region which is not covered with extension settings. In this case is used default Magento Store View. But you have a choice to set some other Store View as a default for such cases. Just set "Overwrite System Default Store View" to "Yes", then will appear parameter "Set Default Store View" where you can choose the appropriate Store View. Just Save Config to enable or disable this feature.

Mage

Country Mapping

It is very convenient when one store view corresponds to some country. For example Store View "UK" - United Kingdom, Fr - France, Germany - De... There is a parameter in our extension called "Enable Mapping for Store by Country", when you set it to "Yes" it checks country ISO code of the user by IP and looks for corresponding store view with the name equal to country ISO code. **Please note that it works only when Store View has the name equal to country ISO code!**

Mag

You still may not use country settings if you want just map country settings to your store views or use Country Groups settings. So you may just leave parameter "Set Countries" equal to "No".

Country Groups

Our extension allows you to set a Store View per group of countries, e.g. EU countries or Asia countries... First you should set the number of groups you want to add with the parameter "Set number of country groups".

Save Config and after page reload you will see new blocks with country groups.

There you should check the countries which will be assigned to this group using parameter "Choose countries". This can be a multiple choice, just press "Ctrl" button on your keyboard and click the countries you want to choose. Then you should check the Store View for this group using the parameter "Set Store View" and Save Config.

Examples

Case 1.

Store View B - USA users

Store View A - all others

Case 2.

Store View A - USA users

Store View B - UK users

Store View C - all others

Case 3.

Store View A - USA users

Store View B - EU users (UK, France, Italy, Germany, Poland, Norway...)

Store View C - all others

Case 4.

Store View A - USA users

Store View B - EU users (UK, France, Italy, Germany, Poland, Norway...)

Store View C - Asia (Thailand, China...)
